Team Roles and Responsibilities

The project team responsibilities were divided to ensure balanced workload and full coverage of the “**Automation Exercise**” website. Each member was assigned specific modules based on functionality, with interconnected features (e.g., Cart and Checkout) handled by the same person for consistency. API testing, user flows, and static pages were also distributed to cover both technical and UI-focused areas. This structure guarantees that all major features of the website are tested while allowing each member to contribute effectively.

Team Member	Assigned Modules/Features
Amr Ashraf Hussien	Cart (add/remove/update items), User Signup/Registration, Checkout / Order Placement
Ammar Khaled Aly	API Testing (provided API endpoints)
Shahd Salah Mahdy	Login/Logout & Writing Test Cases
Madonna Ramadan Abdo	Home Page (navigation, menus, links), Newsletter Subscription
Rana Mamdouh Rafea	Contact Us Page & Video Tutorials Page
Jomana Mohamed Abd El Salam	Products Module (browse, search, categories, product details), Static Pages (About Us, Test Cases page validation)
